

WELCOME TO THE TRM USER FORUM

NOVEMBER 1, 2023

AGENDA:

- WELCOME
- TRMSB UPDATES
- TRMG2 TIPS, TRICKS & TRAPS
- RUNNING THE MODEL AROUND THE BLOCK
- TRMG2 & GITHUB
- NEW TRMG2 REPORTING TOOLS
- MIX & MINGLE

TRM UPDATES

TRMG2V1.3 OFFICIAL RELEASE

Now available on GitHub

The official model for the Region

Online development documentation

Wiki user guide

CURRENT ACTIVITIES

TRMG2v2

- Model boundary expanded
- TAZ and network modifications
- New data development
- Initial application looks favorable
- Next steps

Model Maintenance & Application

- Review of premium transit
- Improvements to transit coding

Updating Travel Trends

Ongoing Development of User Tools

TEAM MEMBER UPDATES

Congratulations to
Nita Bhave on her
new adventure

TRMG2 TIPS, TRICKS & TRAPS

Nita Bhawe and Si Shi, ITRE

TRAPS

How do I get the official model and which TransCAD do I use?

- Model files are available on TRM's GitHub site. Use the correct TransCAD version and build number (listed in GitHub Releases).

Where should I run the model from?

- Run the model directly from your computer's local hard drive. Do not run from the Desktop or a shared drive.

Oh my, the model output takes up substantial disk space!?

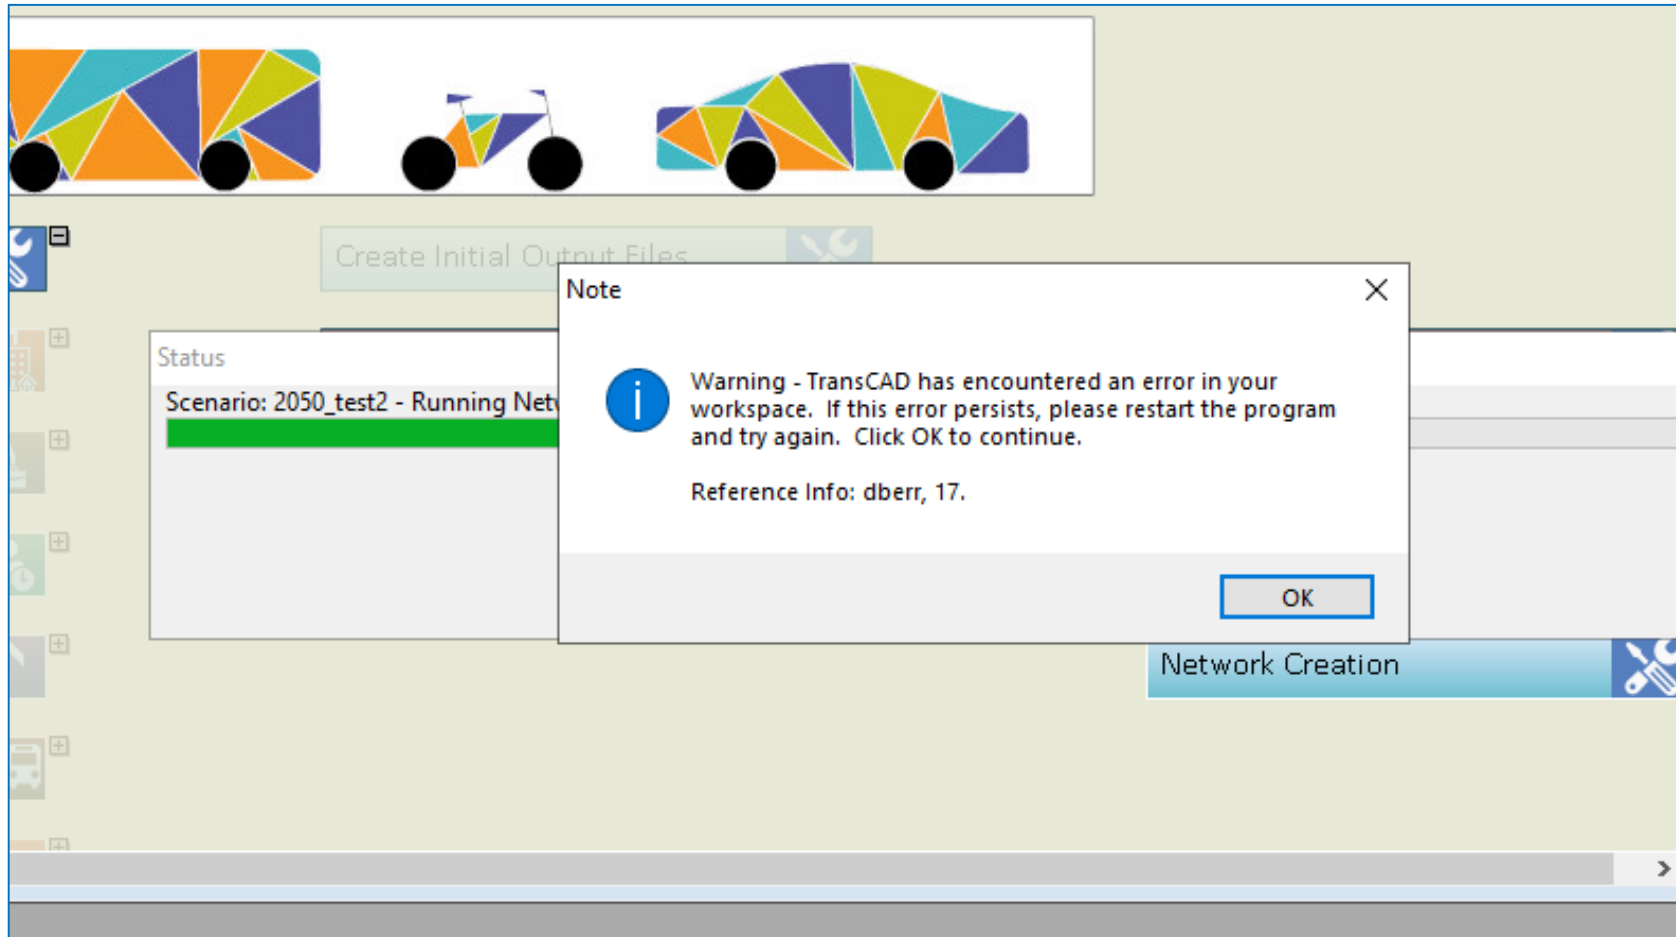

- Ensure there is enough disk space (100+ GB) before running the model. Use the Matrix Delete Tool to delete 50GB of model output files that generally aren't used.

I got an error message. After fixing, can I restart from that step?

- After an error pops up (including workspace errors) first fix the errors. Utilize the TRMG2 documentation and wiki plus TransCAD help as resources.
- Upon fixing errors (1) delete the entire scenario Input and Output folders (2) restart from Create Scenario as the error may impact files generated prior to the error, thus the need to restart from the beginning.

TRAPS

An example of a model error ---- when in doubt, delete both Input and Output folders and files from the scenario folder, and then restart from *Create Scenario*.

Visit the Resources page within the GitHub Wiki for more tips & tricks!

TIPS & TRICKS

Population & Network Data

- Interesting and potentially helpful information on POPULATION is located in the Population synthesis files output\resident\population_synthesis and scenario se data bin file output\sedata\scenario_se.bin

Model Output Summaries

- Get familiar with the numerous helpful summary outputs located in scenario\output_summaries.

Model Tools

- Get familiar with the numerous helpful tools to utilize on a scenario after the model has completely run. Go to the TRMG2 menu / Tools.

Users Guide / Wiki

- Get familiar with the wiki which contains LOTS of helpful information.

RUNNING THE MODEL AROUND THE BLOCK

The Model (v1.3)

The screenshot displays the TransCAD software interface. The main window, titled "Model - trmg2 - D:\TRMG2_v1.1\trmg2.model", shows a vertical flowchart for the "TRIANGLE REGIONAL MODEL". The flowchart consists of the following steps:

- Initial Processing
- Generation Models
- NonMotorized Models
- Time of Day
- Skimming
- Home-based Choice Models

An orange arrow points to the "Skimming" step. Above the flowchart, there are icons for a bicycle and a car, and a logo for "TRIANGLE REGIONAL MODEL" featuring a colorful geometric design. The software's menu bar includes: File, Edit, Map, Dataview, Selection, Matrix, Tools, Procedures, Networks/Paths, Route Systems, Planning, Public Transport, Routing/Logistics, Statistics, TRMG2, Window, and Help. The status bar at the bottom indicates "Model: trmg2".

The logo for Kimley»»Horn is displayed in white text on a dark red background. The word 'Kimley' is followed by three right-pointing chevrons (»») and the word 'Horn'. Below the logo, the tagline 'Expect More. Experience Better.' is written in a smaller white font. The background of the slide features large, abstract, rounded shapes in orange, red, green, and blue.

Expect More. Experience Better.

Questions?

TRMG2 & GITHUB

Kyle Ward, Caliper

MAKING THE MOST OF GITHUB

November 1st 2023

OUTLINE

- What is GitHub?
- Getting the most out of it
 - Getting the model (and the right version)
 - Finding the wiki for guidance on using the model
 - Issues: giving feedback to the model team
- Q&A / Poking Around

WHAT IS GITHUB?

- The most-popular version control system
- Allows development teams to:
 - Manage work tasks
 - Track changes
 - Push official updates to the community
- Allows the community to:
 - Easily download the latest version (or any past version)
 - Provide feedback (issues or suggestions)
 - Get notified when the repo is updated

GETTING THE LATEST MODEL

TRMG2 v1.3 Latest

This is the official Triangle Regional Model and it reflects the adopted 2050 MTP Amendment (August 2023). This model uses TransCAD 9.0 Build 32895.

Numerous reporting tools are provided within the TRMG2 menu and the Wiki provides details and guidance.

Wiki - <https://github.com/Triangle-Modeling-and-Analytics/TRMG2/wiki>

Documentation - <https://triangle-modeling-and-analytics.github.io/TRMG2/>

Summary report files from the 2020 and 2050 scenario are included to confirm that your model run matches the official. After completing a model run, find this summary report here:
output_summaries\roadway_tables\Congested_VMT_by_County.csv.

THE WIKI

The screenshot shows the GitHub interface for the repository 'Triangle-Modeling-and-Analytics / TRMG2'. The navigation bar at the top includes 'Code', 'Issues 20', 'Pull requests 2', 'Discussions', 'Actions', 'Projects', and 'Wiki'. The 'Wiki' tab is highlighted with a red rectangular box. Below the navigation bar, the repository name 'TRMG2' is displayed with a 'Public' badge. A dropdown menu shows the current branch as 'main', with '8 branches' and '7 tags' indicated. A 'Go to file' button is visible on the right. Below the branch information, a pull request by 'dkyleward' is shown, titled 'Merge pull request #320 from Triangle-Modeling-and-Analytics/dev', with a green checkmark and the number '7448434'. At the bottom, a file named 'docs' is listed, and a file named 'Remove caliperR from lockfile' is also visible.

New page

Introduction [↗](#)

TRMG2 is written entirely in GISDK using the native flowchart interface in TransCAD. As a consequence, model installation occurs by opening the trmg2.model file.

TransCAD and Computer Information [↗](#)

TRMG2 v1.0 uses TransCAD 9 Build 32765. Later versions require different Builds (e.g. v1.1 requires 32875 ; v1.2 requires 32885). See the release notes for which Build is required. If your version of TC is too old, a warning message will appear when opening the flow chart.

As of 2022, Caliper achieved the best processing times using the latest Dell machines with 12-th gen Intel CPUs.

Dell XPS Desktop 8950

- 12th Gen Intel(R) Core(TM) i9-12900K processor (16-Core, 30MB Cache, 3.2GHz to 5.2GHz)
- Performance CPU liquid cooling (optional)
- 64GB DDR5, 2x 32GB, at 4400MHz
- 2TB M.2 PCIe NVMe solid state drive
- Windows 11 Pro (this is key for optimum performance)

ISSUES

The screenshot shows the GitHub interface for creating a new issue. On the left, there is a user profile picture. The main form has a 'Title' input field at the top, followed by 'Write' and 'Preview' tabs. Below the tabs is a rich text editor with a toolbar containing icons for bold, italic, code, link, list, and other formatting options. The editor contains the placeholder text 'Leave a comment'. At the bottom of the editor, there is a note about attaching files and a 'Submit new issue' button. On the right side, there are several sections for configuring the issue: 'Assignees' (set to 'No one—assign yourself'), 'Labels' (set to 'None yet'), 'Projects' (set to 'None yet'), and 'Milestone' (set to 'No milestone'). Below these is a 'Development' section with a description, and a 'Helpful resources' section with a link to 'GitHub Community Guidelines'.

Q&A

NEW TRMG2 REPORTING TOOLS AND SUMMARIES

Si Shi and Leta Huntsinger, ITRE

- Tool that allows you to quickly draw comparisons between two different model scenarios.
- Comparison metrics include maps, output csv files, and output bin files.
 - Maps
 - Input land use variables
 - Highway demand metrics
 - CSV files
 - HH strata
 - Home based trip statistics
 - Mode share by trip purpose and time of day
 - Trip length and duration by trip purpose
 - Non home based trip statistics
 - Same as above
 - BIN files
 - Input land use by TAZ and regional summary
 - Highway demand on link level and regional summary
 - Overall mode share by county and TAZ
- Supports a subarea polygon (user defined)
- User guide in the wiki!

INTERESTED IN SOMETHING ELSE?

We can add as many summary tables as you like – just request it via GitHub Issue!

Zero car: Calculate the percent of zero car households per zone for all zones. Use the zonal percentages to determine the 75th percentile threshold for the region. Any zone above the threshold is identified as a zero car disadvantaged community.

Poverty: Calculate the number of households that are within 150% of the poverty threshold defined by Census. Calculate the percent of poverty households per zone for all zones. Use the zonal percentages to determine the 75th percentile threshold for the region. Any zone above the threshold is identified as a poverty disadvantaged community.

Senior: Calculate the percent of seniors per zone for all zones. Use the zonal percentages to determine the 75th percentile threshold for the region. Any zone above the threshold is identified as a senior disadvantaged community.
